

## **TARGET CASTLE**

This is a playground game that can be used to assist children in using their basic motor skills and throwing accuracy. The common way of playing this game is to throw a stone or bean bag from the numbers 1-25, the longer toss the more points and skill required. The higher the number hit the more points "scored". Players can take turns throwing.

Throwing from below the number 5 space or in front of the "door" is a good place to start. Children can adjust from space to space and keep score by the point value their stone or bean bag hits. This is a giant castle that requires a large amount of playground space. Ideal for all Junior grades !
