

## **TRIANGLE HOPSCOTCH**

This is a variation of the original playground hopscotch, once again encouraging children to learn skills such as jumping on one foot, gaining their balance and recognizing the order of elementary numbers. Set in a triangular form, this game can be played by any amount of children and proves to be a lot of fun!

The main purpose of this style of hopscotch is for the players to always face the number 10 which is at the top corner of the triangle, even if this means hopping backwards which in one direction it does! This can be tricky and is what makes this game different from the rest!

While in play, the first player hops into square 1 and then jumps sideways to square 6. The player then hops diagonally forwards to square 10 and then proceeds to jump diagonally backwards to square 1 again and then hops out of the triangle.
